WINNING ON THE RUGBY FIELD MEANS BEING BETTER THAN YOUR OPPOSITION.

WINNING IN AGRICULTURE IS THE SAME.

So why then do many farmers settle for doing the same things they have always done, the same things their fathers and grandfathers did. Where is the competitive advantage in that?

A winning rugby team is Tougher, Faster and Smarter than the opposition. How can farmers take their game to the next level:

Be Tougher:

It is possible to grow plants that are tougher than the competition. Tough plants are strong plants, they don't wilt and can perform under pressure, be that heat or drought, insects or diseases, it all starts with optimal nutrition.

A winning farmer will never compromise on Nutrition because they know you are what you eat, and the same is true for their plants.

Every springbok player follows a nutritious and balanced diet to get the most out of their bodies and minds. You won't find any top athlete eating junk food, or too few calories. Like people, plants also need to "eat" well to perform well.

Healthy Soil = Healthy Plants = Healthy People

Work Harder:

A top player trains harder than the opposition, growing their body or skillset whenever they get a chance.

A hard-working crop is one that grows at its full potential without stopping. Photosynthesis is the engine of your crop, and you control its power. Plants need at least 16 elements to grow. Leaving even one out will mean it won't reach its potential.

Play Smarter:

Winning coaches are the ones with deep insight into how the game is played. Likewise, farmers who are at the top of their game have a deeper level understanding of how their farms work, and especially their most valuable asset which is their soil. Taking the time to learn about how soil works in the way nature intended it to work, will unlock the hidden potential of your crop

Each tablespoon of healthy soil contains up to 7 billion microbes, and you need to make sure they are on your side. Soil and plant sap testing can identify where your strengths and weaknesses are so you can build a strategy to improve.

Healthy Soil = Healthy Plants = Healthy People

Bring on the Bomb Squad!

The Springboks are a very fit squad, but they play with a very high intensity. In the second half the players can become tired, its only natural when giving 100% for so long. This is where the coaches bring on the replacements – the bomb squad!

In South Africa, a growing season can be very long. All the while the plants need complete nutrition if they are to perform at their best. You don't want your fertilizer to run out at the crucial moment when your plants need it the most.

Talborne's answer is to Top-up your crop with Nourish liquid fertilizers to give the plant the energy it needs to grow to its maximum potential.
